### EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Scott Smiley on July 30, 2007.

The application has been amended as follows:

- - Claim 1 (currently amended): A shim, comprising:

a body portion; and

an arm portion including arms defining a slot therebetween and having:

a transverse extent; and

a longitudinal extent longer than the transverse extent and extending longitudinally from the body portion, each arm having a wave shape, the shape and direction of the wave of each arm traveling along the longitudinal extent, the arms being of a thickness and of a material that allows them to compress and elastically return substantially to their initial wave shape after a compressive force is removed; and

further comprises a tab attached to said body at a side opposite said wave-shaped extending arms. - -

- - Claim 10 (currently amended): A shim, comprising:

a body portion; and

an arm portion including arms defining a slot therebetween and having:

a transverse extent; and

a longitudinal extent longer than the transverse extent and extending longitudinally from the body portion, each arm having a wave shape, the shape and direction of the wave of each arm traveling along the longitudinal extent, the arms being of a thickness and of a material that allows them to compress and elastically return substantially to their initial wave shape after a compressive force is removed and wherein each of the wave-shaped bodies are removably attached to at least one other one of the wave-shaped bodies; and

further comprises a tab attached to each of said bodies at a side opposite said wave-shaped extending arms. - -

- - Claim 18 (currently amended): A method for shimming an element, which comprises the following steps:

inserting at least one shim into a gap between and defined by the element and an adjacent structure, the at least one shim including:

a body portion; and

an arm portion including arms defining a slot there between and having:

a transverse extent; and

a longitudinal extent longer than the transverse extent and extending longitudinally from the body portion, each arm having a wave shape, the shape and direction of the wave of each arm traveling along the longitudinal extent, the arms being

of a thickness and of a material that allows them to compress and elastically return substantially to their initial wave shape after a compressive force is removed; and further comprises

fully inserting the shim between the two elements by utilizing a tab attached to the shim; and

subsequently separating the tab from the shim. - -

- - cancel claims 2, 11 and 19 - -

### **REASONS FOR ALLOWANCE**

The following is an examiner's statement of reasons for allowance: the prior art fails to disclose or suggest a wave shaped shim having a wave shaped arm where the direction of the wave travels along the longitudinal extend and where the shim further comprises a tab.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jessica Laux whose telephone number is 571-272-8228. The examiner can normally be reached on Monday thru Friday, 6:30am to 2:30pm (est).
